

LOCAL COVERAGE WITHOUT TOWER

- Minimal and Fringe (red, yellow, gray) east of Railroad Street and south along the Niagara Parkway, Green areas are less dense coverage in-between existing sites
- Lack of tall infrastructure or existing telecommunication sites with adequate height means a new structure is necessary
- A new structure on Railroad street at 70m adequately addresses Rogers coverage requirements reducing the need for multiple installations

FUTURE COVERAGE WITH PROPOSED SITE

- Optimal coverage (dark and light blue) with site C3967 (Railroad) in operation
- A new 70m tower in this area will help to provide effective coverage to area residents while creating minimal visual intrusion
- The new site will help to provide reach and capacity inside and out of buildings as well as create a contiguous network with existing and future planned base station sites
- This proposed site in conjunction with proposed C3169 at Line 8 covers the large deficiency area surrounding the Niagara Parkway
